<sup>1</sup> For the ex-ante illustration of related costs and charges, financial market regulations make a distinction between:

- **Costs and charges related to investment services:** these include all costs and charges invoiced by the bank or third parties, when the customer has used the services of these third parties, for the investment service(s) and/or additional service(s) provided to the customer. Examples: brokerage fees, transaction fees, custody fees, etc.
- **Costs and charges related to the financial instrument:** these include all costs and related charges associated with the production and management of financial instruments. Examples: production costs, management fees, etc.
- **Payments from third parties received by the bank:** these include fees, commissions and other monetary advantages that the bank receives from third parties in connection with the provision of investment services. Example: retrocessions

Costs charged by the manufacturer of the financial product are excluded from the scope; only CBP Quilvest's costs and charges are taken into account in the calculation of the impact of costs and charges on the performance of the financial instrument.
